Data#3 Achieves Advanced Technology Partner Certification for Cisco Unified Computing Systems

On Tuesday 7 September, Data#3 Limited (ASX:DTL) was recognised for meeting the rigorous qualification criteria to attain *Advanced Technology Partner* accreditation for Cisco Unified Computing Systems (UCS). The certification signifies Data#3's capability to design, supply, implement and support next generation data centres leveraging Cisco's UCS technology.

This latest accreditation further enhances Data#3's reputation as a leading provider of solutions based on Cisco technologies with over 12 years of experience as a Cisco partner whilst achieving the highest level of partner certification as a Gold Certified Partner for the past 6 years.

 "The UCS Advanced Technology Partner certification further acknowledges our commitment to delivering market leading solutions to our customers, and provides a platform which significantly enhances our existing compute, unified communications and virtualisation solutions. Additionally, we see potential for Cisco UCS to facilitate our Dynamic Desktop offering," said Laurence Baynham, Group General Manager of Data#3.

"Data#3 has maintained a successful Data Centre practice for over 10 years, and sees Cisco UCS as a natural evolution of our data centre offerings. Solutions that combine network, storage and servers require an architectural understanding of our customer's environments. The architectural approach to providing secure and scalable technology solutions to our customers' business requirements, is core to Data#3's go to market strategy," continued Baynham.

ANZ Data Centre Regional Manager, Dylan Morison of Cisco said "This is an outstanding accomplishment that demonstrates Data#3's commitment to enhance its existing Data Centre capabilities for customers. We value the ongoing partnership and expertise that Data#3 has demonstrated, and look forward to working together to develop solutions which support Data#3 and their customers."

Data#3 bring together customers' and solutions for compute, storage and network technologies with a secure and highly scalable architecture.
