Microsoft Azure
Monitoring

63% of IT professionals find cybersecurity analytics and operations more difficult today than they were two years ago[1]

What are you missing when it comes to Azure?

Are you struggling with:

- Attracting and retaining cloud talent?
- Finding cloud engineers as an in-demand technical resource?
- Recruiting additional cybersecurity analytics and operations staff?

You need Azure Monitoring!

What are you missing?

We have found that:

- Deploying and operating monitoring solutions can be costly and time-consuming.
- Native tools often can't adequately fulfil monitoring requirements. Third party solutions are frequently required.

    What is your strategy to monitor your Azure environment?

What's the Risk?

We have found that:

- Monitoring is critical to remain secure in Azure
- Only 22% of customers are using Azure Security Centre
- Monitoring your cloud state is critical to maintain security and compliance for your business

    How confident are you that you won't be the next headline?

The Cost of Inaction

We have found that:

- 75% of customers are paying too much for their Azure[1]
- Some are overpaying by 70%
- Cost can change by the minute as new workloads come online

    What is status quo costing you?

What is the Data#3 Azure Monitoring Services?

Azure requires careful ongoing monitoring to ensure your cloud environment is available, secure and cost optimised. It's also important to ensure that appropriate governance, risk and compliance controls are in place and being utilised. The Azure Monitoring service helps customers monitor and manage their Azure environment.

The service includes insights into usage, billing, security, cost management, compliance and best practices. The service provides daily reports, remediation recommendations, detailed analytics, provisioning, alerts, and access to Data#3's Azure experts to support your environment, including pre-agreed automated response to ensure your Azure subscriptions are optimised, secure and available.

"Cloud professionals that designed and built clouds do not have the necessary architecture training in their specific cloud disciplines. This places IT managers in an unfortunate position where they cannot fully trust those cloud professionals they're currently relying on"

Andrew Froehlich
InformationWeek

Microsoft Azure
Monitoring

Azure Monitoring supports compliance, and helps you mitigate risk

Stop Wasteful Cloud Spending

- Cost management monitoring to understand resource cost and utilisation
- Save up to 70% on your current Azure bill
- Free up budget for transformation projects

Understand and Mitigate Risk

- Identify any critical security alerts. Customised recommendations on cloud governance and security risk exposure mitigation.
- Have confidence that your instance is configured to best practice
- Improve your risk posture, and take steps to improve governance

Free Up Expensive Resources

- Free up your expensive skilled cloud resources to deliver business transformation initiatives and higher value tasks
- Leverage Data#3's skills and operations experts to support your Azure environment
- Get rapid remediation for Azure issues as they occur

What to expect from the Azure Monitoring Service

Gain insights into your Azure environment, including compliance reporting, application performance, cost optimisation and security monitoring. The monitoring service is backed by Data#3's Managed Services team to provide expert recommendations and remediation, should we uncover issues in your environment.

- Learn where you could be saving money. Customers are spending more than they should on their Azure bill through lack of cost visibility and monitoring.
- Understand your Azure risk posture, and receive proactive notification of security risks
- Maintain compliance for GRC controls against your Azure environment
- Gain insights into your Azure environment through analytics and daily reporting

Why Data#3?

Data#3 has the deep expertise your business needs to maximise its investment in Azure. As Microsoft's largest Australian partner, Data#3 has unparalleled competencies in Azure, licensing, system integration and managed services. Our five-stage pathway to cloud success is based on Azure best practices. Whether you are new to Azure or looking for advanced Azure services to take your business to the next level, Data#3 can connect you with the resources and expertise you need.

Your Next Steps

- For more information, visit our Azure cloud page.
- Take action today and connect with your Data#3 experts today
