

## Empower your security strategy with Cisco Meraki and Cisco Umbrella

In today's rapidly evolving digital landscape, organisations face an ever-increasing array of threats and vulnerabilities. From sophisticated cyberattacks to cybersecurity threats and even internal breaches, the need for robust security measures has become imperative to organisations fortifying their digital infrastructure.

Did you know that a survey by Cisco identified that only 15% of organisations surveyed globally are prepared to handle the security risks of our hybrid world?

With many things to consider in your security strategy, it can be difficult to know where to start. Data#3, [Cisco's Global Partner of the Year for Security \(2022\)](#), and Cisco are here to help you understand the potential consequences of inadequate protection and the benefits of making better informed choices, so you can choose the best platform to bolster your organisation's defences to look ahead to a secure future.

### Choosing the right security tools for you

#### Cisco Meraki helps you to:

- ✔ Streamline deployment and scalability with plug-and-play device support and automatic updates,
- ✔ Underlay and Overlay monitoring in support of your SD-WAN deployment.
- ✔ Improve security with built-in features like firewall, intrusion, detection/prevention, malware threat protection and content filtering
- ✔ Enhance network visibility and monitoring through intuitive dashboards, Meraki Health route-cause analysis with suggested remediations, and real-time analytics.

[Explore Meraki](#)

#### Cisco Umbrella helps you to:

- ✔ Deploy seamlessly for robust DNS layer security and comprehensive secure internet gateways,
- ✔ Extend security coverage beyond the network perimeter to safeguard remote offices, mobile devices, and roaming users,
- ✔ Proactively protect the organisation from emerging threats with AI-driven threat intelligence and real-time detection as monitored by the Cisco Talos team,
- ✔ Bypass traffic backhauling, slashing latency, and elevate your internet services' performance with core cloud applications.

## Unleash next-level security and efficiency for the modern workplace

Did you know that deciding between Meraki and Umbrella is not mutually exclusive? These platforms complement each other to provide an even more comprehensive security framework.

Enter [Secure Access Service Edge \(SASE\)](#), a network architecture providing a unified approach to network and security integration, for highly efficient and secure operations through a single cloud-based service.

Integrating Meraki with Umbrella as part of a SASE security strategy not only ensures consistent security, but also simplifies security management and provides valuable network visibility.

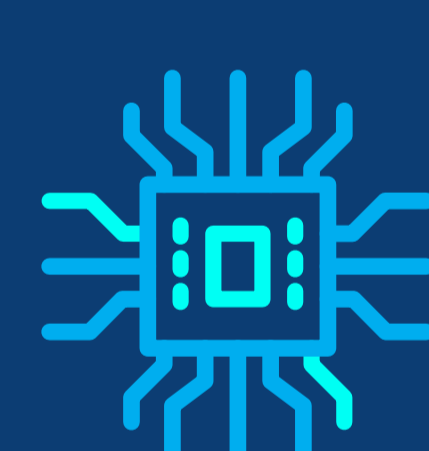

### What makes partnering with Data#3 to integrate Meraki with Umbrella a winning combination?

Integration combines the strengths of both platforms for multi-layered protection

Enables simple traffic controls by IP address or interface

Proactive AI-driven threat intelligence and real time detection

Streamlined network configuration and security enforcement for protection on and off the network

Enhanced DNS functionality including DNS encryption, split DNS and DNSCrypt Proxy

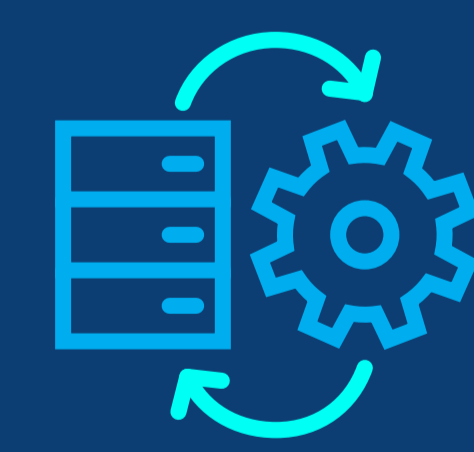

Supports seamless scalability to expand network infrastructure with consistent security policies

Access to additional security controls

Easy to deploy Umbrella policies across many devices

Simple and secure access to local network resources

## Elevate your security posture with ThousandEyes and Duo by Cisco

As your organisation evolves, so do your security needs. Incorporating SASE into your security strategy provides a flexible and scalable foundation to integrate with additional tools when you're ready, such as ThousandEyes (part of Cisco) and Duo by Cisco.
