# **Azure in region – Ten Years In....**

# Azure – Ten Years In

Azure became available in the region in late **2014**, Azure has now been a part of the local IT landscape for ten years.

Azure services have grown to over **300** types of services, now joined by a range of cutting-edge AI services.

# Data#3 Azure Periodic Table of Elements

# Azure – Continued Investment

- Microsoft is investing \$5B over this year and next year to expand its hyperscale cloud computing and AI infrastructure in Australia, increasing its computing capacity by 250%.
- Addition of cutting-edge AI services / models.

Azure Open AI Service Consumption

# AI-Ready Infrastructure

# How do I make Azure AI-Ready?

1. “How did Microsoft get AI Ready?”
2. “How do I operationalize my AI solution?”
3. “What is the baseline landing zone to get the AI solution running?”
4. “How do I get my AI solution to safely access my data sources?”
5. “What are the networking requirements for my AI solution?”
6. “How do we migrate and secure our estate to enable AI at scale?”
7. “How do I secure my AI solution?”
8. “How do I monitor the cost of the AI solution?”
9. “What policies and protocols do I need to comply?”

# AI-Ready Infrastructure

## Landing Zone

- Enterprise Landing Zone aligned to Cloud Adoption Framework (CAF) and Well-Architected Framework (WAF).
- Segregation of resources.
- Well defined management structure and roles-based access control.

## Data

- Unified, readily accessible data.
- Business continuity and data protection.
- Data security and encryption.

## Network

- Well-defined virtual network topology.
- Azure network security (Firewall, DDoS, NSG's, Network Watcher).
- Private Endpoints and Private Links.
- Azure DNS, DNS Zones, and Private DNS Resolver.

## Security

**Defender for Cloud:** secure your Azure services, threat protection for AI workloads.

**Sentinel:** raise AI solution security posture with SIEM, automation, and response.

**Front Door Services/WAF/DDoS:** leverage edge services for CDN, web-application firewall, and DDoS protection.

**APIM:** apply enhanced security controls for APIs.

**Security Copilot:** manage security posture with natural language response and threat intelligence.

## Management

**Azure Monitor and Log Analytics:** manage with application logs, dashboard reports, monitoring, and alerting.

**Azure Policy:** use Azure Policies to audit/enforce compliance settings for applications, data, and infrastructure.

**Azure Copilot:** enhance management with an AI assistant that knows your environment.

# Landing Zones and Core Infrastructure

# Azure Landing Zone – a Foundation for Azure

Enterprise Enrolment and Billing

The right Azure licensing agreement type, billing model.

Identity and Access

Well-defined roles-based access control (RBAC), secure access to resources.

Network Topology

Structured virtual network topology supporting network security and connectivity to on-premises.

Resource Organization

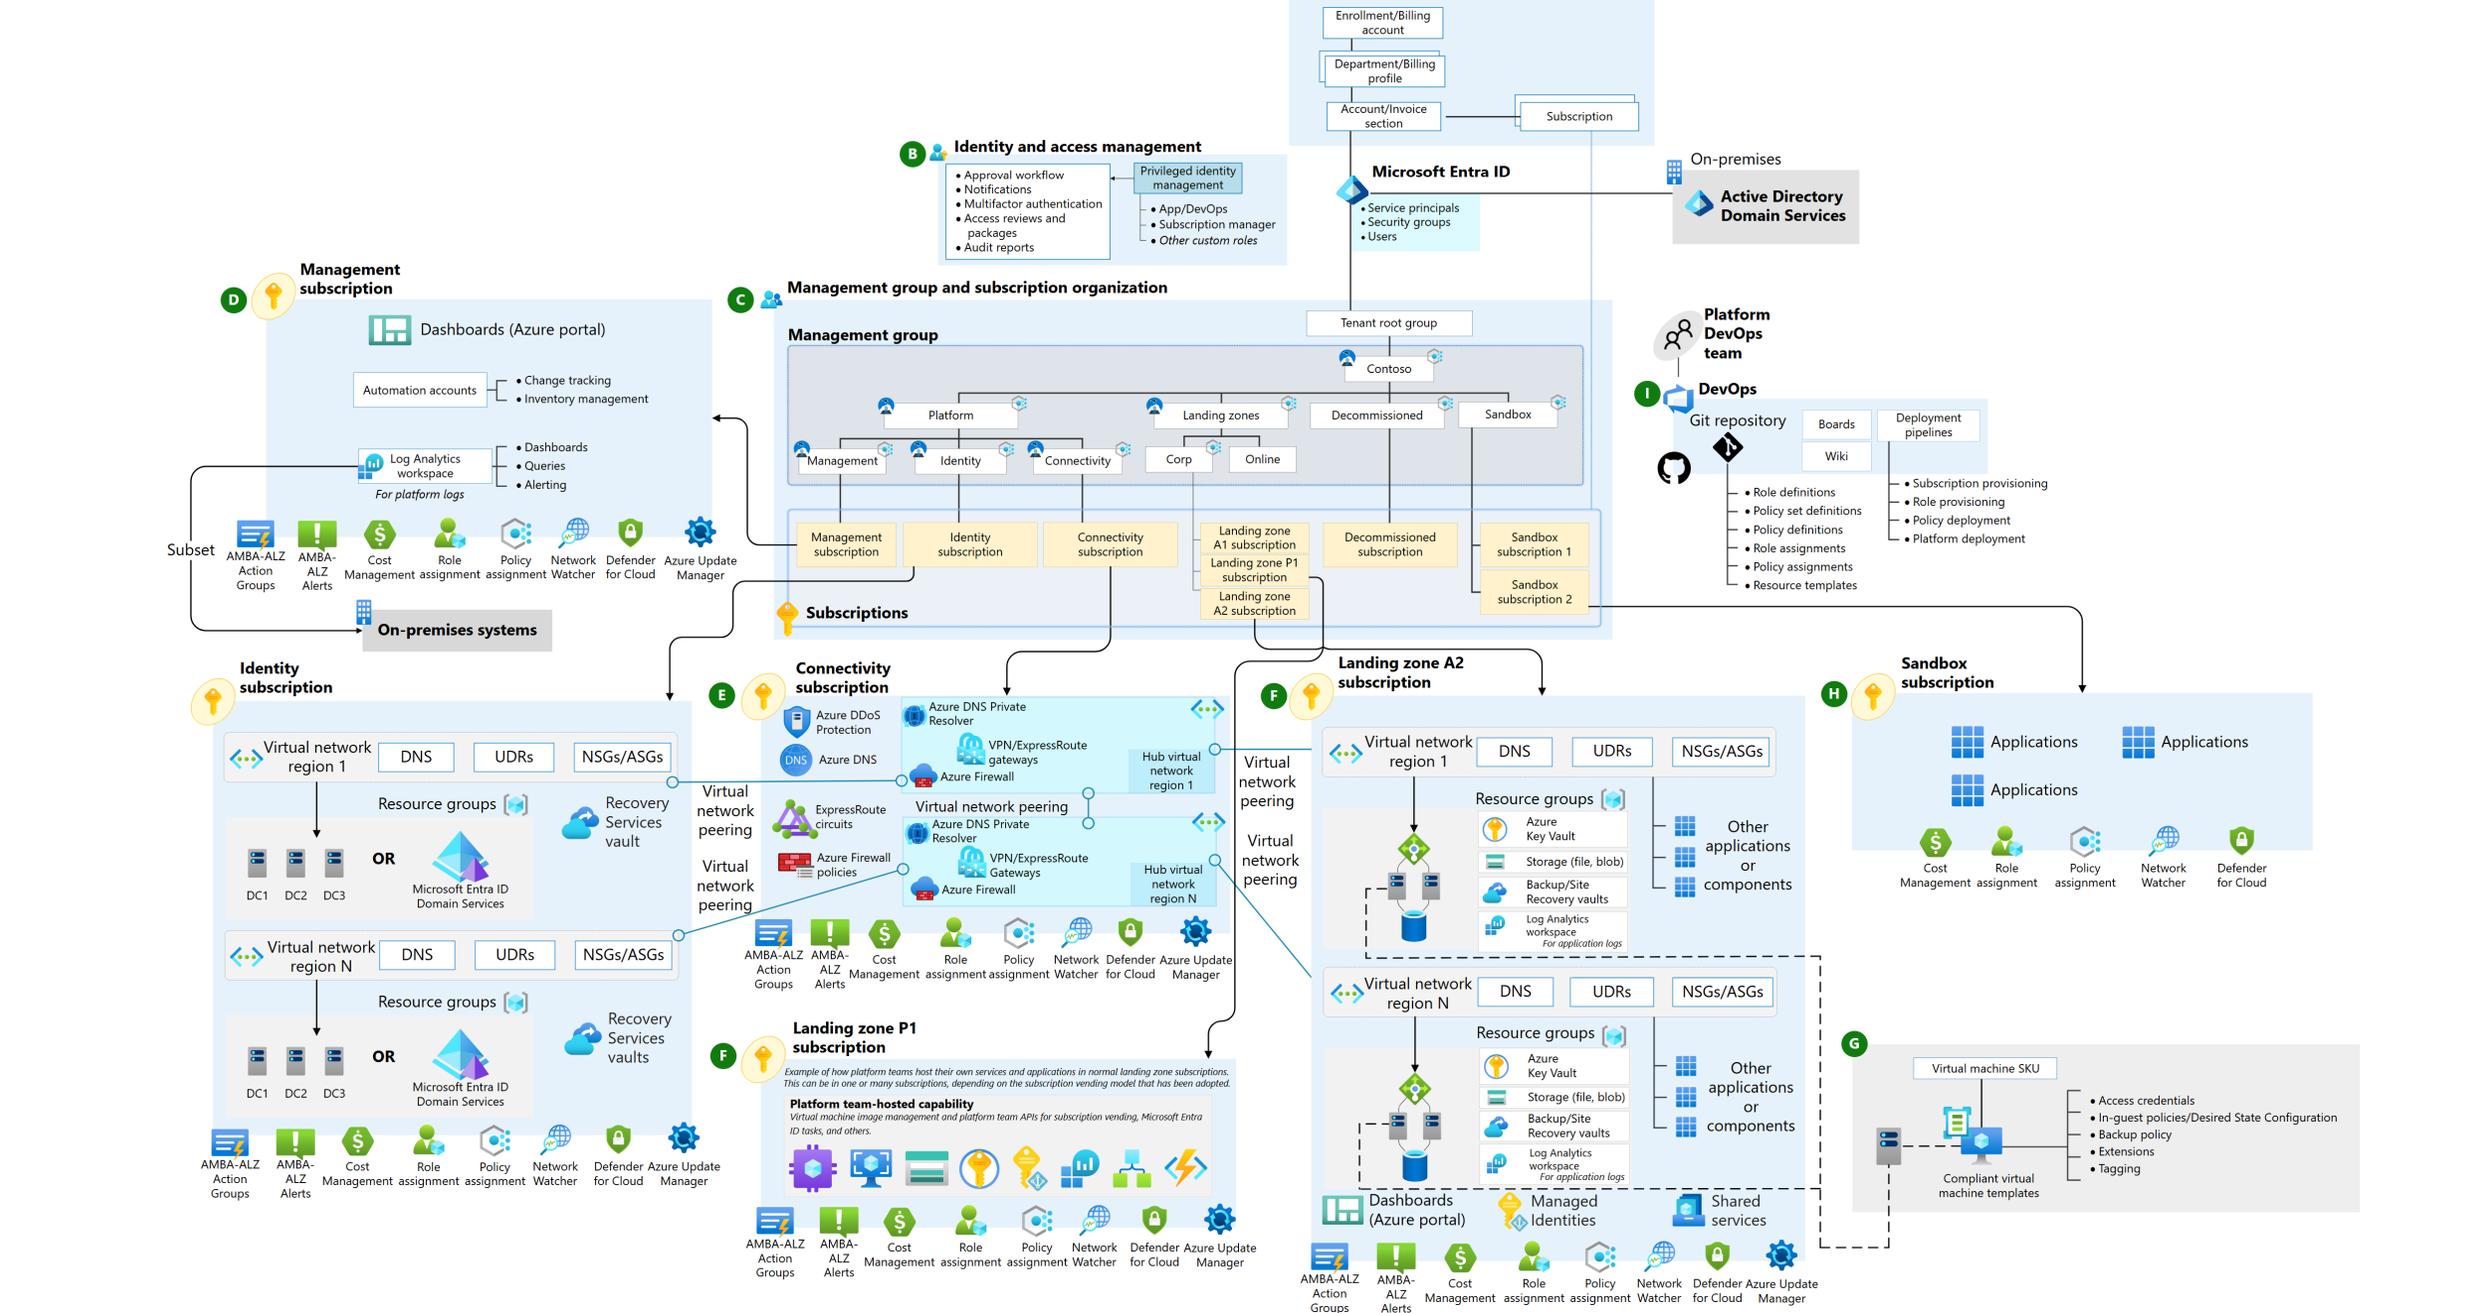

Management groups, assignment of resources in subscriptions / resource groups, naming, and tagging.

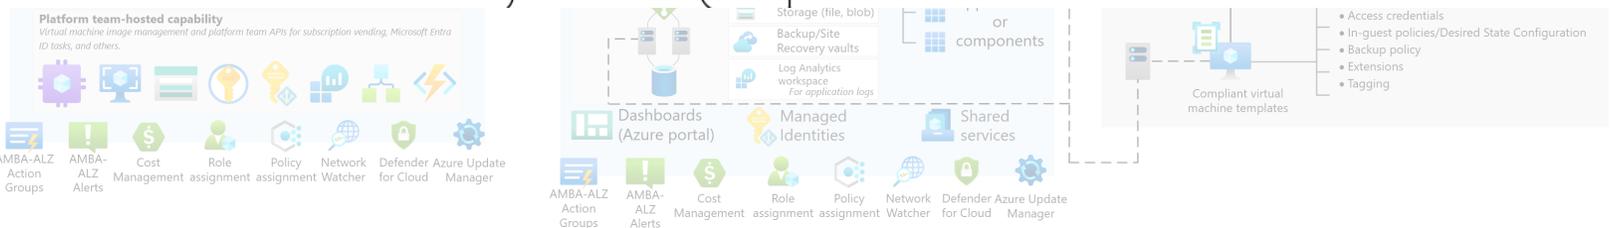

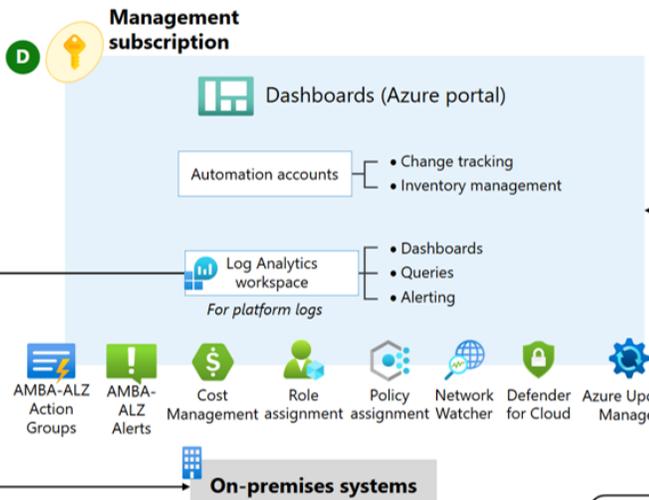

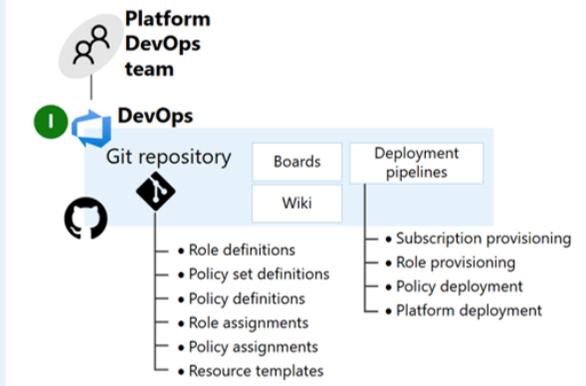

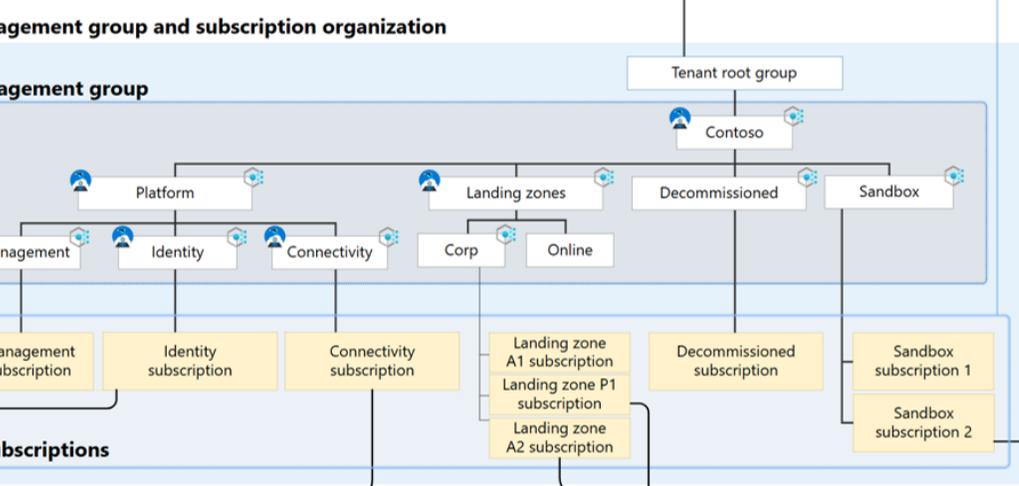

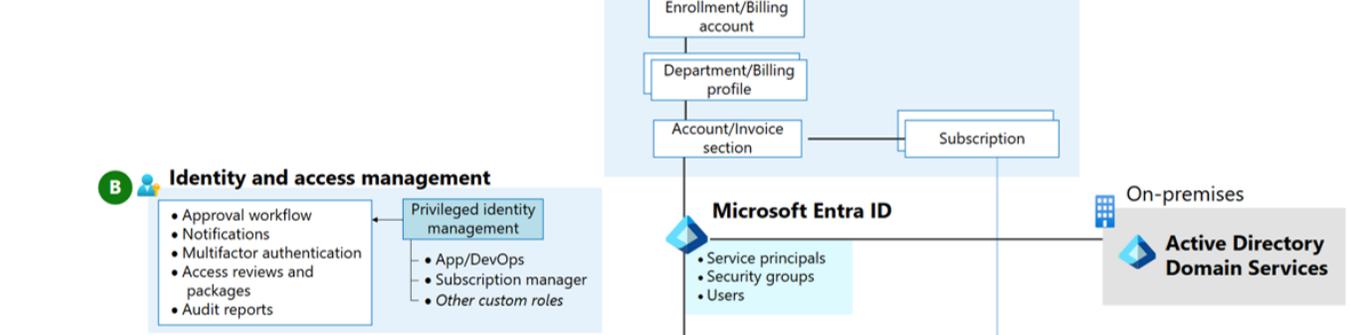

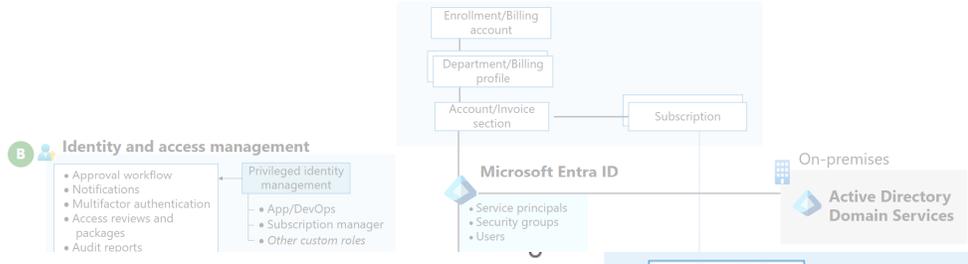

Security and Compliance

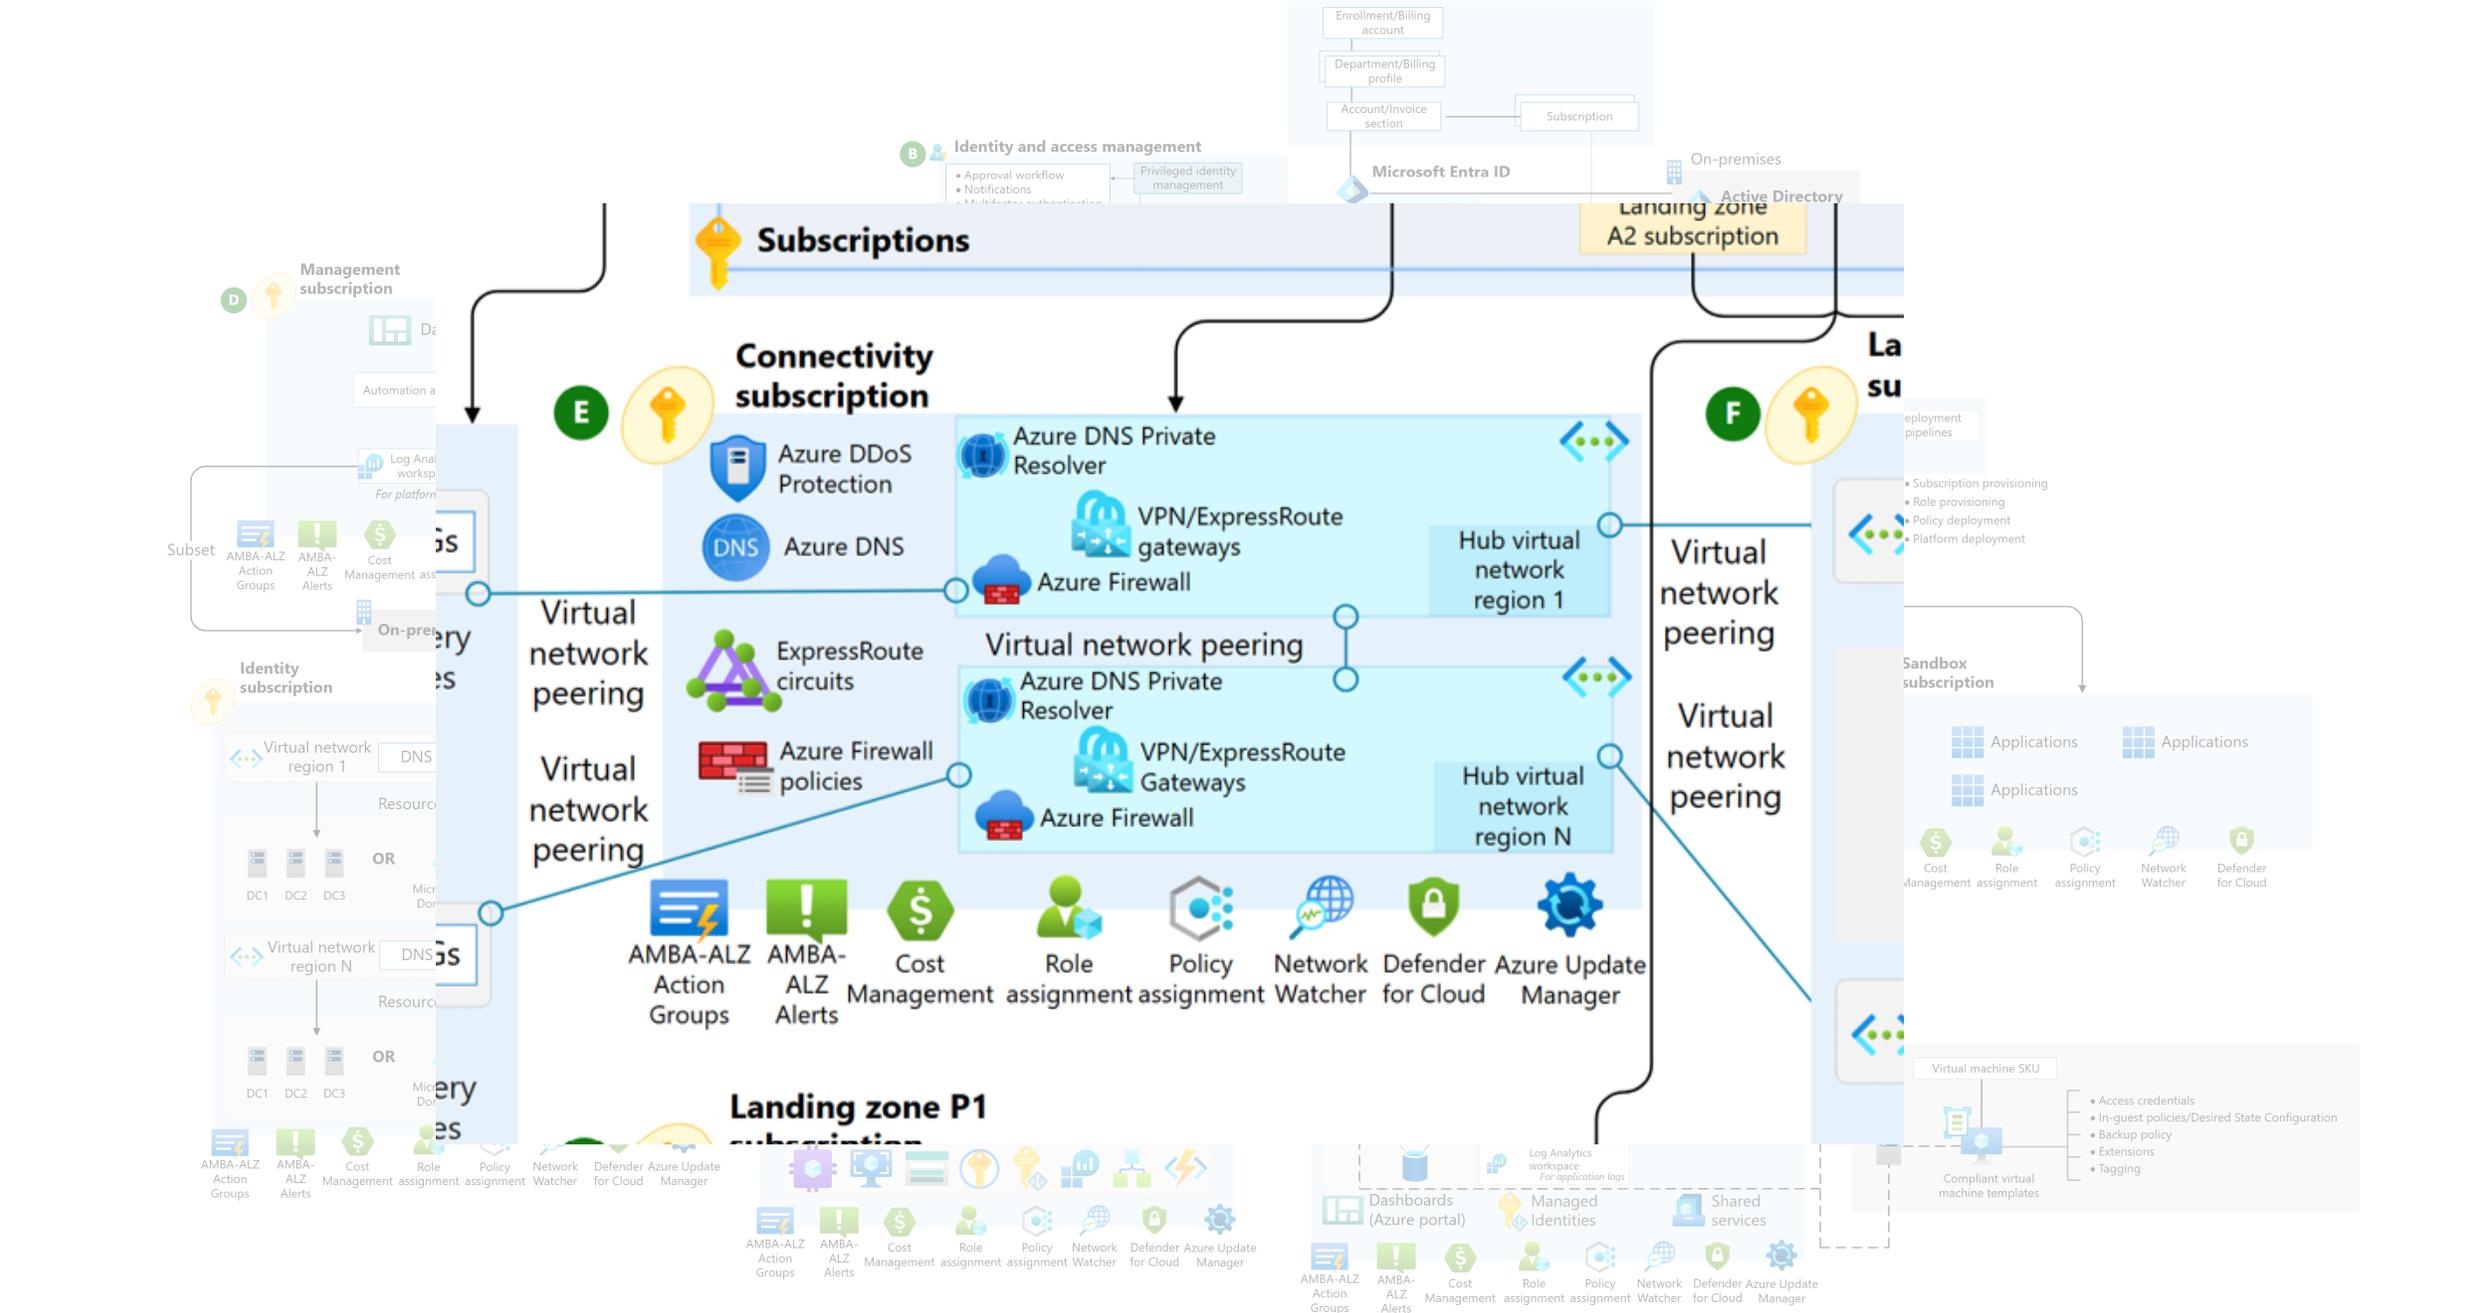

Defender for Cloud, Microsoft Sentinel, Microsoft Cloud Security Benchmark, built-in security initiatives

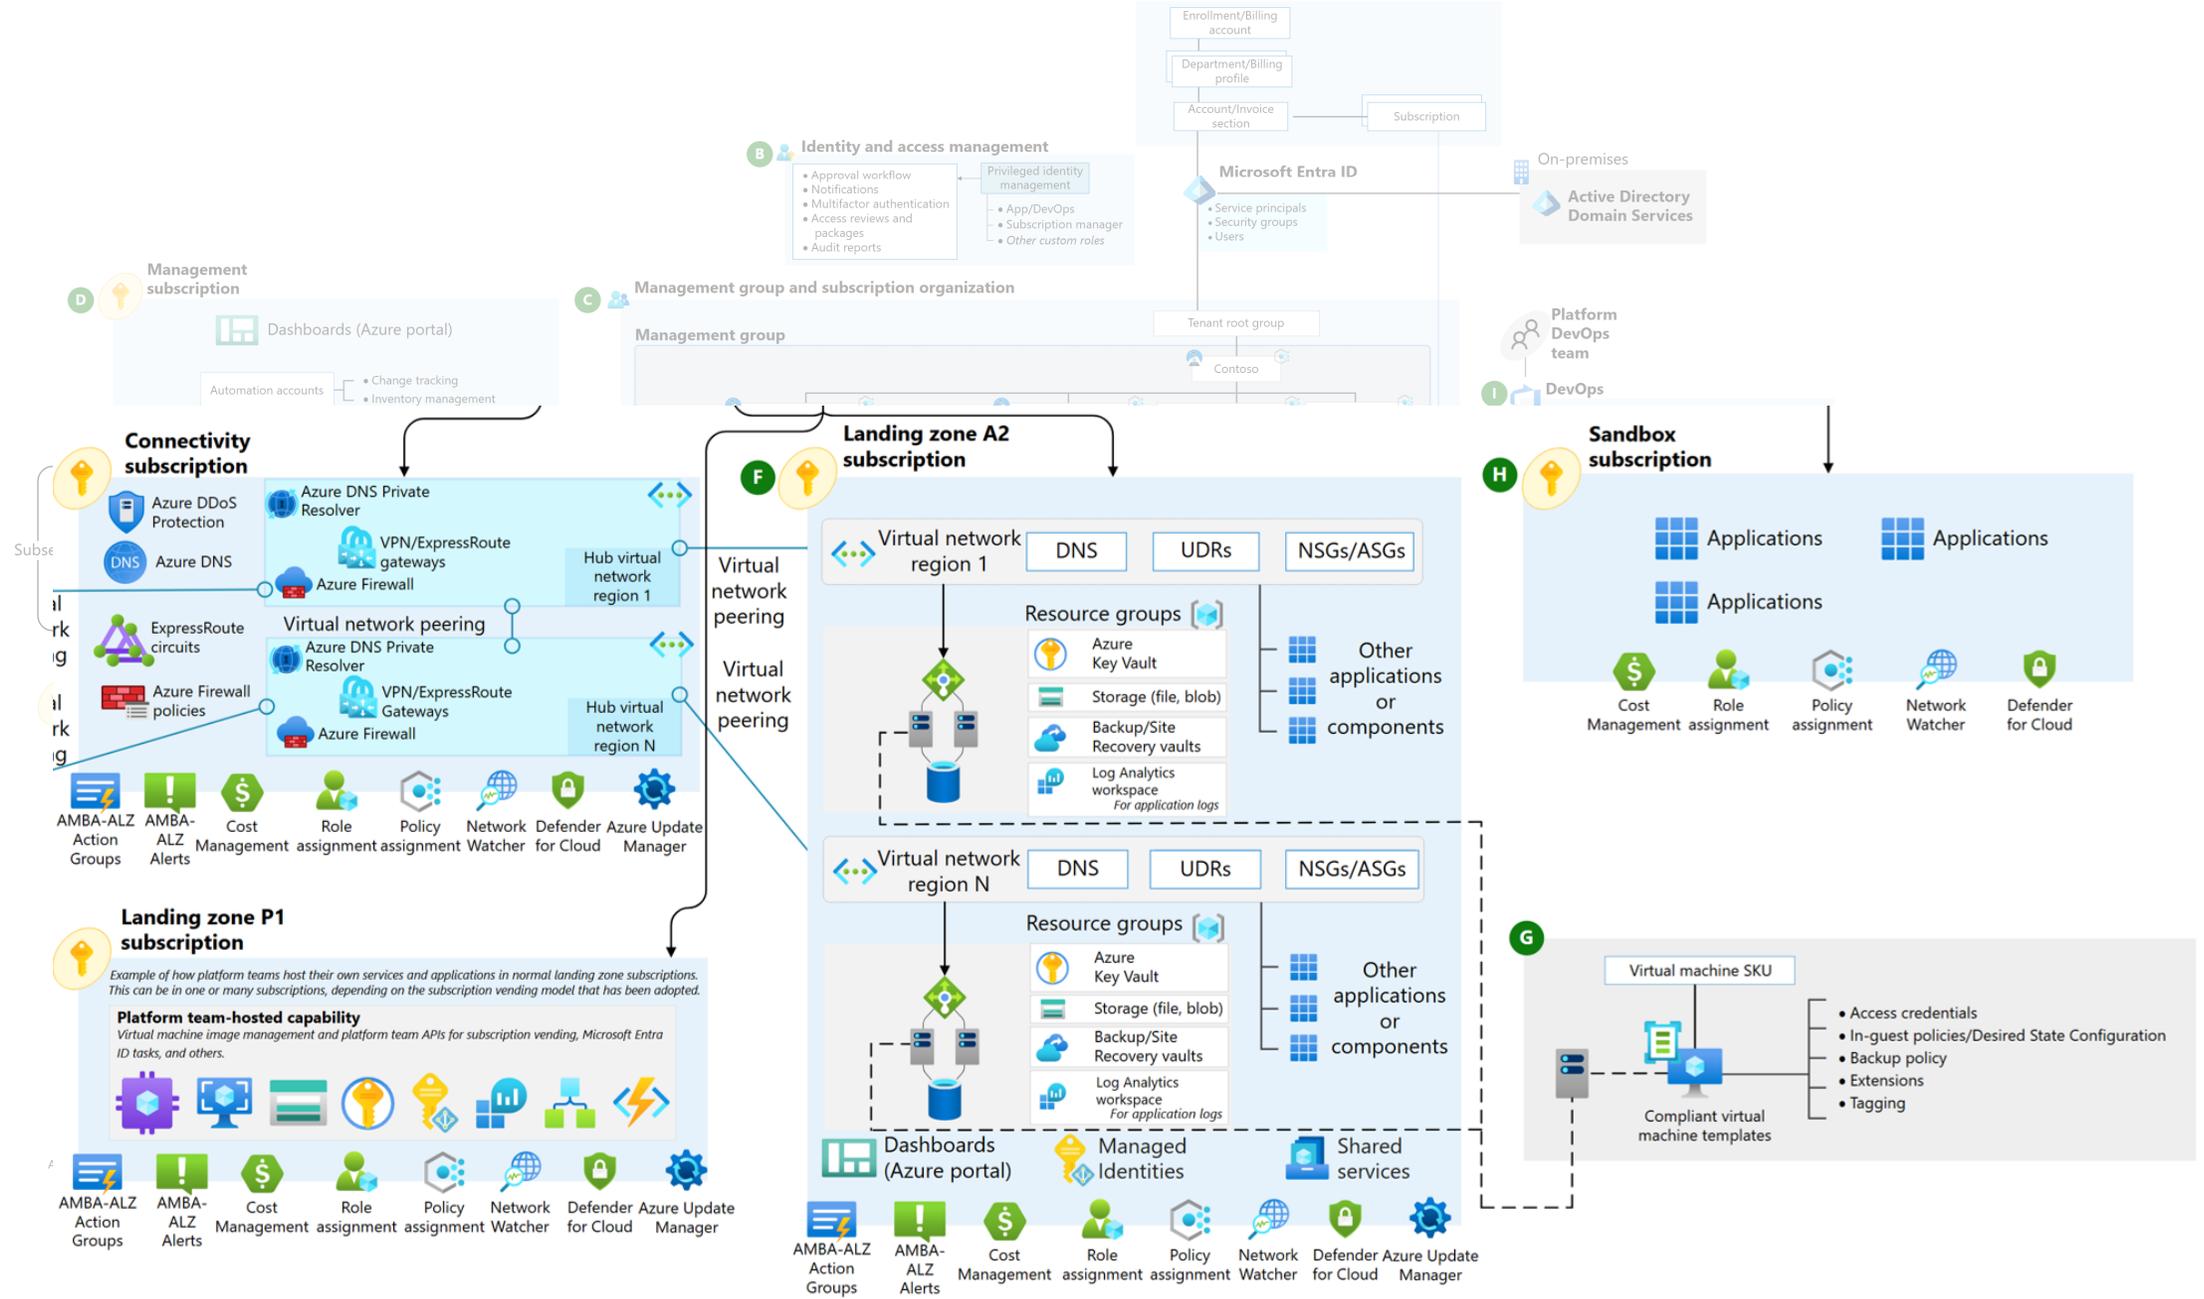

Governance

Azure Policy.

# Azure Landing Zone Deployment

- Manual
- Use of Accelerators
  - Microsoft
  - Data#3
- Infrastructure-as-code
  - Bicep
  - Terraform

# Data and Analytics – a Foundation for AI

# Challenges Generating Value from Data

Siloed systems, poor-quality data

Costly integration and ongoing maintenance

Technical platforms requiring advanced skills and limited resources

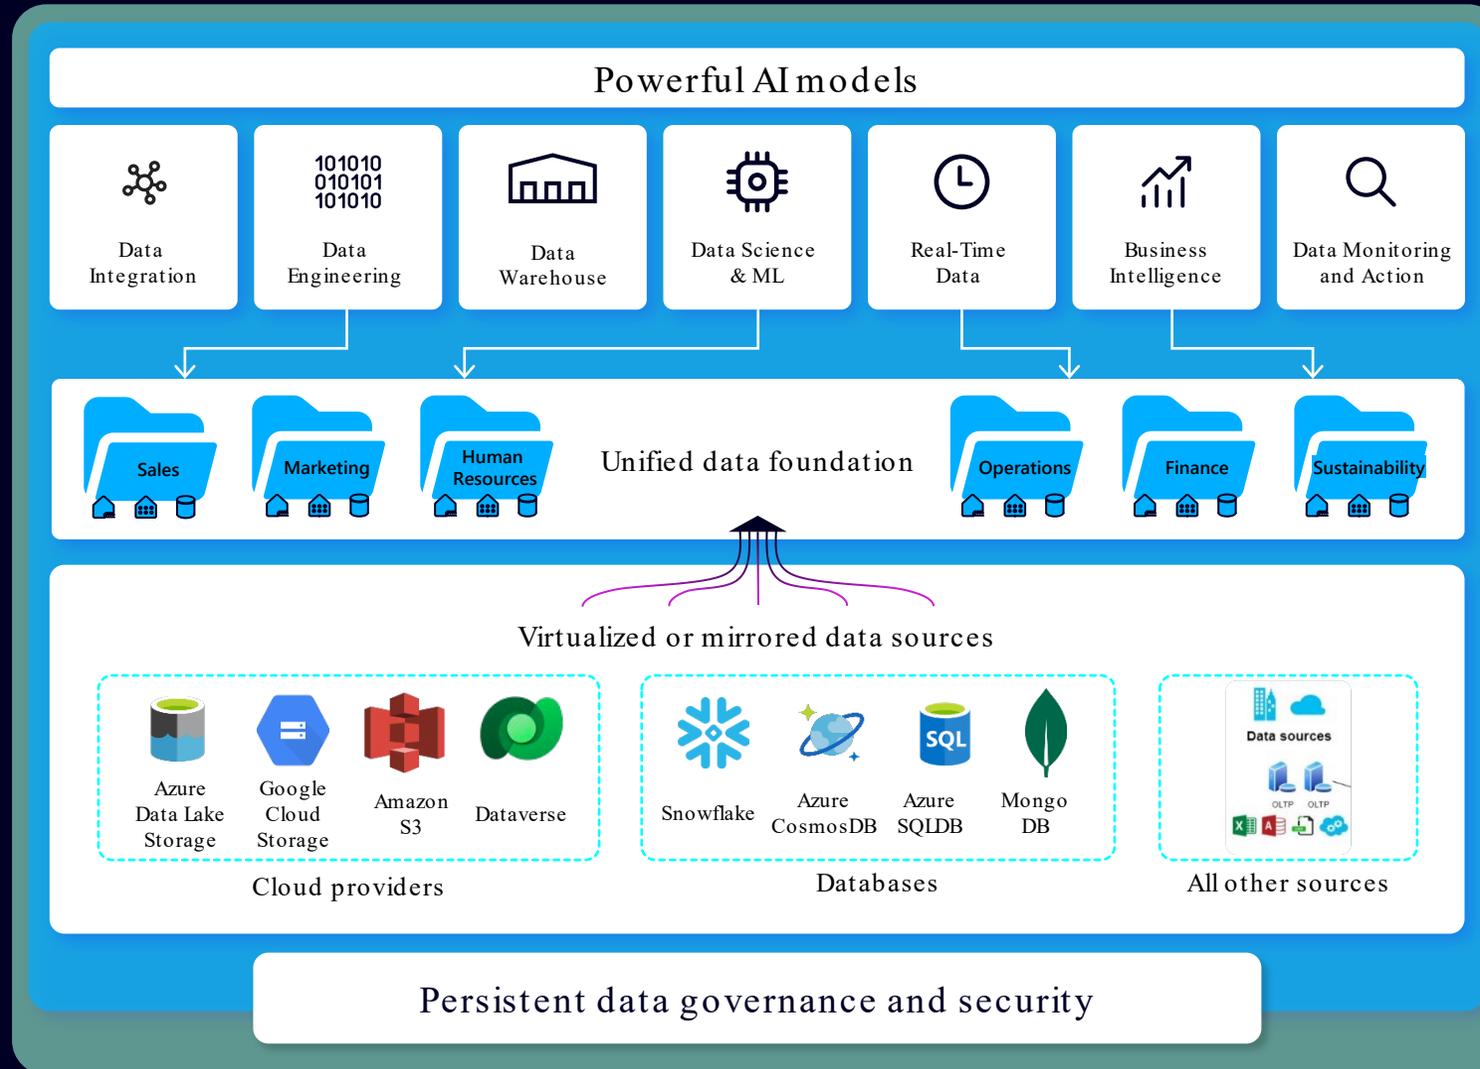

Data governance and security risks

Lagging BI and AI adoption

‘AI is only  
as good  
as the  
data it’s  
trained  
on’

# Unify Your Data Estate

# Microsoft Fabric

# Networking

# Network Considerations

- Azure network topology and connectivity to on-premises
- Azure network security
  - Firewall (Azure Firewall, 3<sup>rd</sup> party firewalls)
  - NSG's
  - Azure Front Door services /Application Gateway / Web Application Firewall
  - DDoS
  - Network Watcher
- Private Endpoints and Private Links.
- Azure DNS, DNS Zones, and Private DNS Resolver.

# Networking – the Rise of 3<sup>rd</sup> party NVA's

- 3<sup>rd</sup> Party Firewalls (e.g. Palo Alto NGFW)
  - Supporting centralised management of firewalls across Azure, on-premises, and other clouds
  - Can be available as a VM based appliance or PaaS service
- SD-WAN
  - Providing integration into SD-WAN (Cisco, Meraki, etc.)

# Azure OpenAI

## Azure OpenAI Service: Unlocking the Power of Advanced AI Models

### Technical Overview

Artificial Intelligence (AI) has become a cornerstone of modern innovation, and Microsoft Azure OpenAI Service is at the forefront of this revolution. By integrating OpenAI's cutting-edge models into the Azure ecosystem, organisations can leverage state-of-the-art natural language processing (NLP), computer vision, and generative AI capabilities to solve complex business challenges. Let's dive into the technical architecture and explore the advanced models available in Azure OpenAI Service, including GPT-4.5, GPT-4 Turbo, GPT-4o, DALL-E, Whisper, and more.

### Architecture and Scalability

Azure OpenAI Service is built on Azure's robust cloud infrastructure, ensuring enterprise-grade scalability, reliability, and security. The service operates as a managed API, enabling seamless integration into applications without requiring deep expertise in AI model training or deployment. By leveraging Azure's global network of data centres, the service provides low-latency access to AI models, ensuring high performance even for demanding workloads.

The architecture is designed to support multiple AI models, each optimised for specific use cases:

- GPT-4.5 and GPT-4 Turbo:** These models represent the pinnacle of generative AI, offering unparalleled capabilities in text generation, summarisation, and conversational AI. GPT-4 Turbo is a more efficient variant, designed for high-throughput applications.
- GPT-4o:** A specialised version of GPT-4 optimised for audio-based applications, such as transcription and voice-to-text processing.
- GPT-3.5:** A highly capable model for tasks requiring advanced language understanding, such as content creation, sentiment analysis, and code generation.
- DALL-E:** A generative AI model for creating images from textual descriptions, enabling innovative applications in design, marketing, and content creation.
- Whisper:** A state-of-the-art model for automatic speech recognition (ASR), supporting multi-language transcription and translation.
- Embeddings:** These models are designed for semantic search, recommendation systems, and clustering tasks, providing vector representations of text for advanced analytics.
- Fine-tuning Models:** Azure OpenAI allows organisations to fine-tune models on their proprietary data, ensuring outputs are tailored to specific business contexts.
- Assistants:** Pre-configured conversational agents built on GPT models, designed for customer service, virtual assistants, and other interactive applications.

**Data#3**

A photograph of a modern building with a large, illuminated sign on its facade. The sign features the text "Data#3" in a bold, blue, sans-serif font. The letters are three-dimensional and appear to be lit from within, casting a soft glow. The building has a white upper section and a lower section with large glass windows. The sky is a clear, bright blue.
